

**REMARKS**

Applicant has carefully reviewed and considered the Final Office Action mailed on March 26, 2004, and the references cited therewith.

Claims 10-16 and 18-34 are pending in this application.

**Notice of Appeal**

If the Examiner does not allow the claims upon reconsideration, Applicant hereby gives notice of appeal of the rejections, under 37 C.F.R. section 1.191.

**§102 Rejection of the Claims**

Claims 10-16 and 18-34 were rejected under 35 USC 102(e) as being anticipated by Jawahar et al. (hereinafter “Jawahar”) U.S. Patent No. 6,298,356. Applicants respectfully traverse. Jawahar describes a system wherein a customer accesses a web page using the customer's computer and browser, is connected to a sales agent who is using the agent's browser and computer, and the customer and agent are connected to one another to converse by text windows and/or telephone. Jawahar lacks storing a second transaction by the customer into a database and storing another first transaction by the agent into the database, to which access is enabled to the customer and the transactions accessed by the customer. The Office Action points to Figs 1, 2, 4, and 12, none of which show a plurality of transactions for a database including one from a service customer and one from a service provider.

The 4<sup>th</sup> and 5<sup>th</sup> paragraphs of Jawahar describe what they mean by “transaction”:

“Exemplary transactions in a transaction processing environment include telephone calls, facsimile transmissions, electronic mail (e-mail), video sessions, or network sessions (such as an Internet session). A particular transaction can be either inbound (e.g., received by a transaction processing system) or outbound (e.g., transmitted from a transaction processing system).

A transaction processing system is any device capable of receiving, transmitting, queuing, routing, or otherwise processing a transaction. A transaction processing system may also handle mixed transactions (e.g., receive a telephone call and respond to the telephone call using e-mail). Example transaction processing systems include automatic call distributors (ACDs), call centers, and other telephone call processing devices. The teachings of the present invention may be used with any type of transaction processing system.”

Jawahar does not selectively enable the service customer to access any stored transactions in a database (“selectively enabling access by the service consumer, based on an identification

**of the service consumer, to the stored first and second transactions associated with the service consumer to whom access is enabled”**). The Examiner points to Col 4 lines 28-34 and col 6 line 44 to col 7 line 52. There is no teaching or suggestion in those areas of enabling the customer to access transactions in the database, as recited in claim 10 and claim 14.

The Office Action points to tables of information accessed by the customer; however, this is a log of web pages accessed and time spent at each, and is not enabling access to the customer (i.e., service consumer) to transactions stored in the database based on an identification of the customer, but rather only to log of web pages accessed. The customer is sent web pages to look at and text (from the agent) to read, but does not have access enabled to obtain transaction information from a database. On column 4 lines 10-24, Jawahar does not list database transactions, but rather lists:

“Exemplary transactions in a transaction processing environment include telephone calls, facsimile transmissions, electronic mail (e-mail), video sessions, or network sessions (such as an Internet session). A particular transaction can be either inbound (e.g., received by a transaction processing system) or outbound (e.g., transmitted from a transaction processing system).

A transaction processing system is any device capable of receiving, transmitting, queuing, routing, or otherwise processing a transaction. A transaction processing system may also handle mixed transactions (e.g., receive a telephone call and respond to the telephone call using e-mail). Example transaction processing systems include automatic call distributors (ACDs), call centers, and other telephone call processing devices.”

In contrast, the present invention as recited in claims 10 and 14 provides a method (or media having the method) comprising:

**receiving a plurality of transactions for the database system including a first transaction from a service provider and a second transaction from a service consumer, wherein the first and the second transactions are each associated with the service consumer;**

**storing the plurality of transactions into the database system; and**

**selectively enabling access by the service consumer, based on an identification of the service consumer, to the stored first and second transactions associated with the service consumer to whom access is enabled.**

This distinguishes the present invention from Jawahar. Accordingly, reconsideration and an early indication of allowance of these claims and their dependent claims is respectfully requested.

As to claims 11, 15, and 32, Jawahar describes "an expiration date of the requested resource determines whether the requested resource should be cached," but does not describe a

docketing provider (i.e., wherein the due date for performance of various items is specified according to rules for each item). In contrast, the present invention is useful for such professions as law and others wherein due dates are routinely provided. The Office Action has failed to provide a *prima facie* case of anticipation. The claimed combination where the method further includes "receiving transactions by a docketing provider" is clearly distinguished. Accordingly, reconsideration and an early indication of allowance of these claims is respectfully requested.

As to claims 12, 20, 26 and 33, Jawahar describes logging past web accesses and communicating changes in the agent's and customer's pages, but does not describe logging action items (i.e., items wherein action is required for each item). In contrast, this feature of the present invention is useful for such professions as law and others. Accordingly, reconsideration and an early indication of allowance of these claims is respectfully requested.

As to claim 16, Jawahar describes logging past web accesses and communicating changes in the agent's and customer's pages, but does not describe logging action items (i.e., items wherein action is required for each item). In contrast, the present invention is useful for such professions as law and others. Reconsideration and allowance of this claim is respectfully requested.

As to claim 18, this claim and its dependent claims are means-plus-function claims, and must be examined under 35 USC 112 paragraph 6, to be the structure and acts described in the present invention and equivalents thereof. The Office Action has failed to provide a reference with the required equivalents as analyzed under 35 USC 112 paragraph 6. Accordingly, reconsideration and an early indication of allowance of these claims is respectfully requested.

As to claims 22 and 28, Jawahar does not describe extracting a database transaction from an electronic message. Accordingly, reconsideration and an early indication of allowance of these claims is respectfully requested.

As to claims 23 and 29, Jawahar does not describe an input device for a database transaction, but rather a generic input device. Applicant cannot find any indication that this input device is used for entering a database transaction in Jawahar. Accordingly, reconsideration and an early indication of allowance of these claims is respectfully requested.

As to the remaining claims not separately discussed above, each is dependent on a claim that appears allowable, as discussed above. Further, each describes further limitations that form a combination with the respective parent claim, and these combinations are also not described in the cited reference. Accordingly, reconsideration and an early indication of allowance of these claims is respectfully requested.

Conclusion

Applicant respectfully submits that the claims are in condition for allowance and notification to that effect is earnestly requested. The Examiner is invited to telephone Applicant's attorney ((952) 278-3501) to facilitate prosecution of this application.

If necessary, please charge any additional fees or credit overpayment to Deposit Account No. 19-0743.

Respectfully submitted,

CHARLES A. LEMAIRE ET AL.
